User of Information Technology

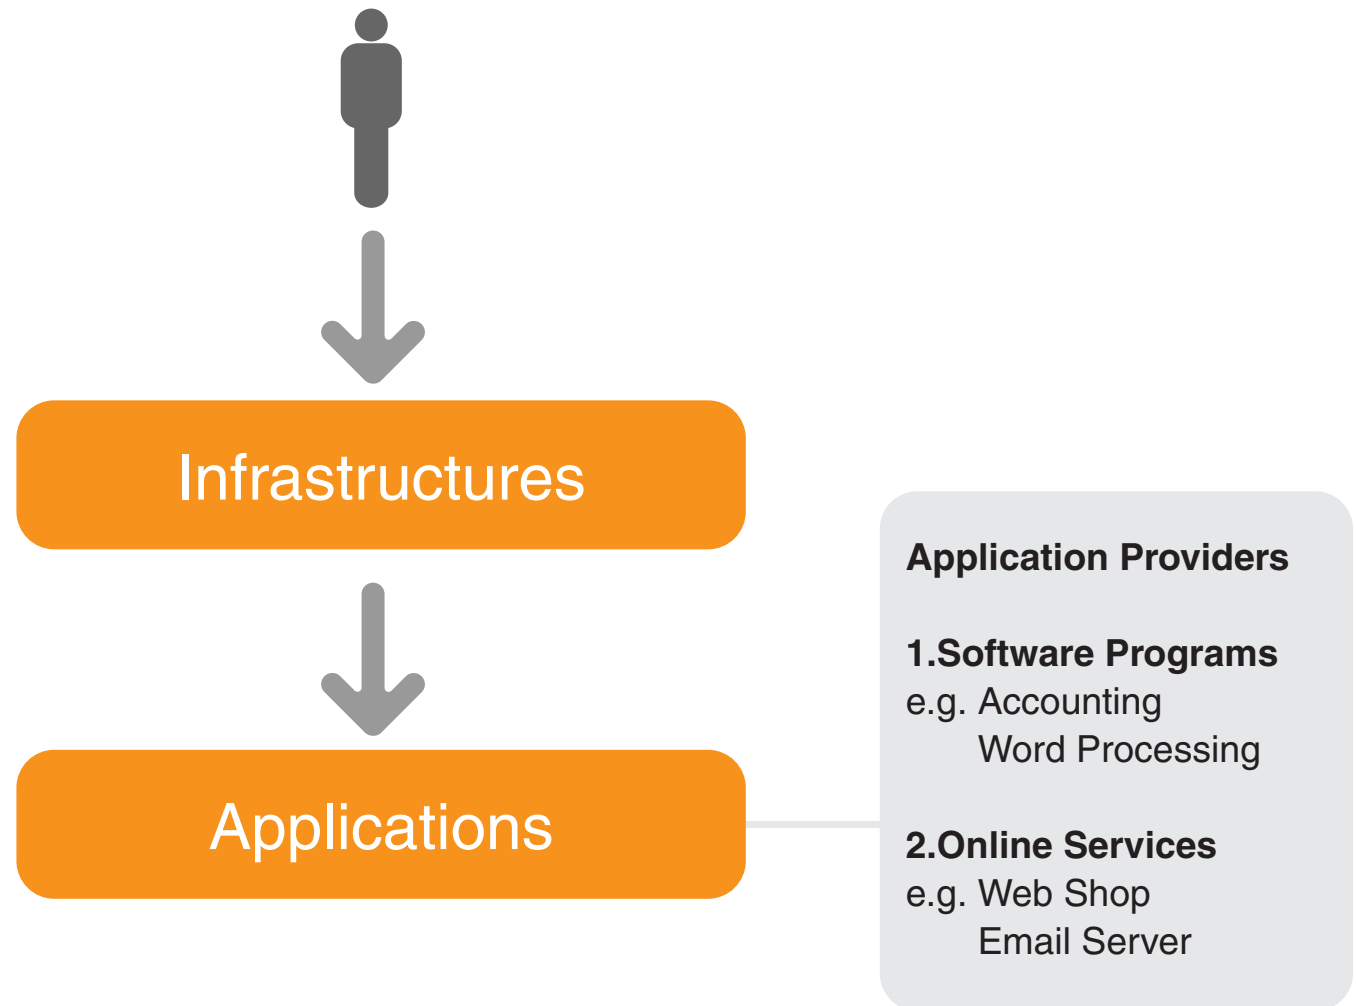

Traditional Providers of Information Technology

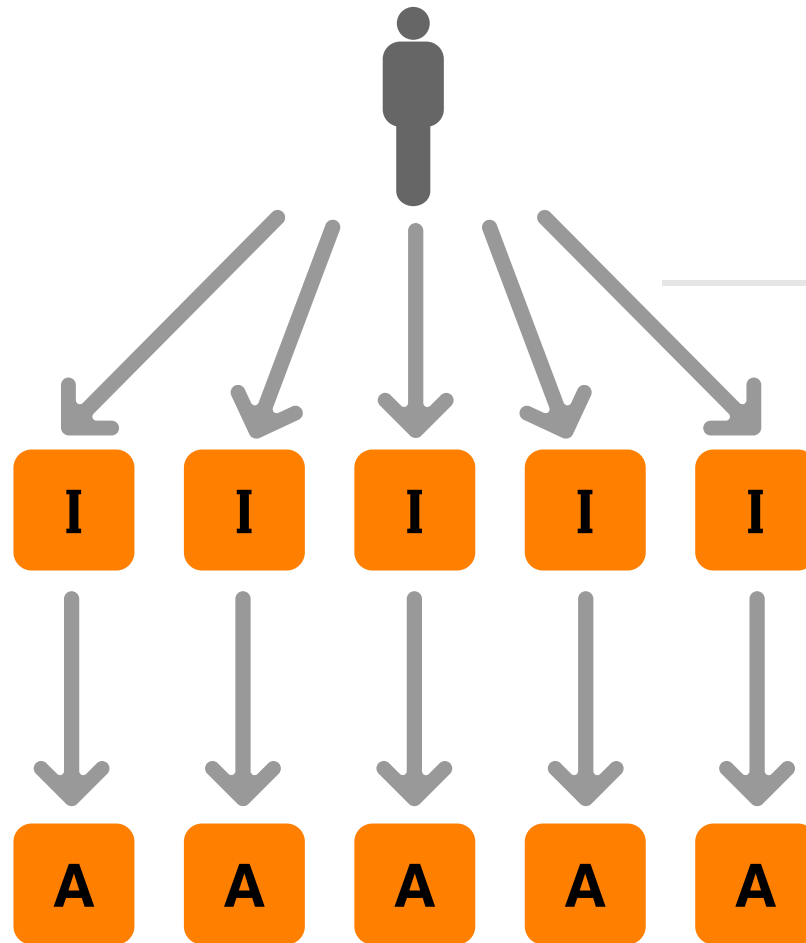

Traditional Providers of Information Technology

Traditional IT Experience

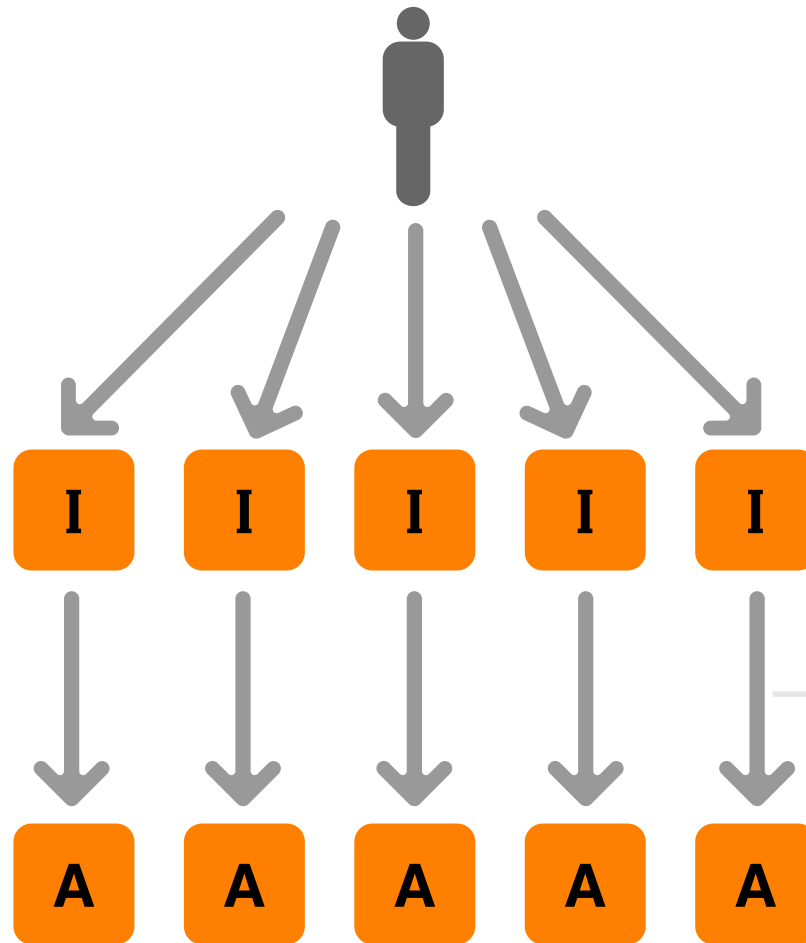

Interface Confusion

1. Different Infrastructure has different User Interface
2. Limited Interaction between different Infrastructures

Traditional IT Experience

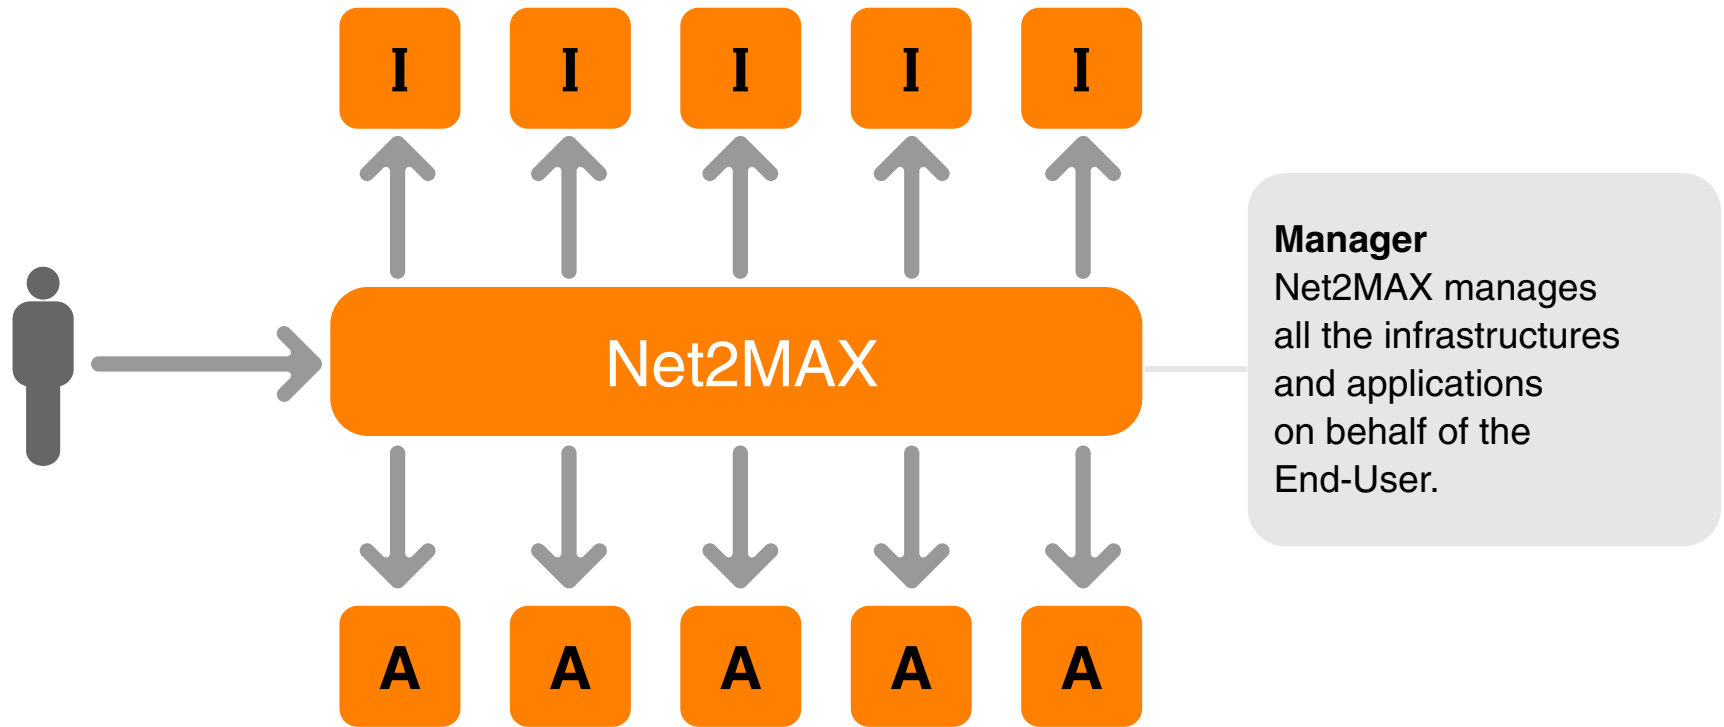

Application Locked-In

1. Applications pinned down to specific Infrastructures
2. Limited Interaction between different Applications
3. Expensive to run due to Duplication of Infrastructure
4. Complex to use due to large numbers of Different Application

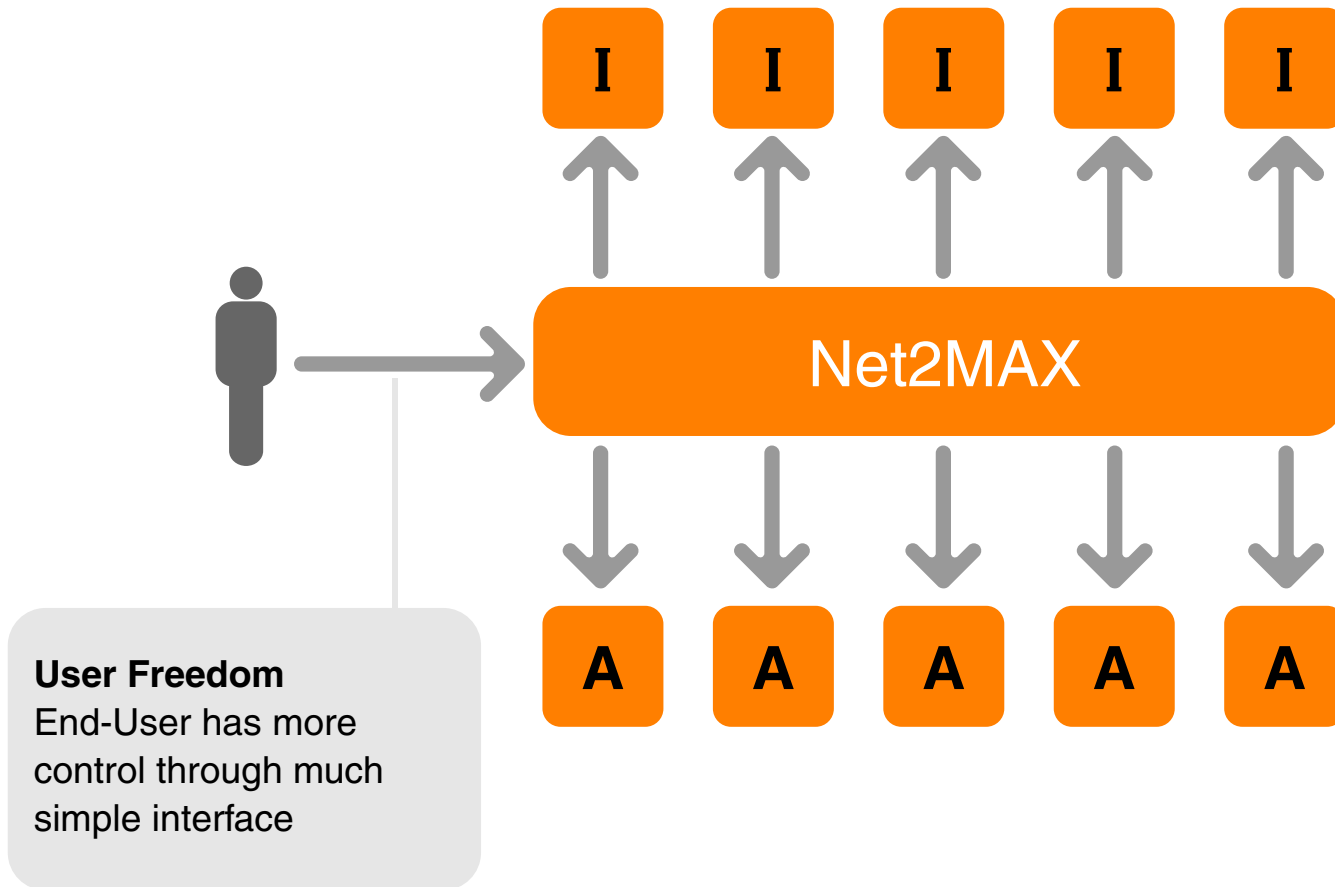

Net2MAX IT Experience

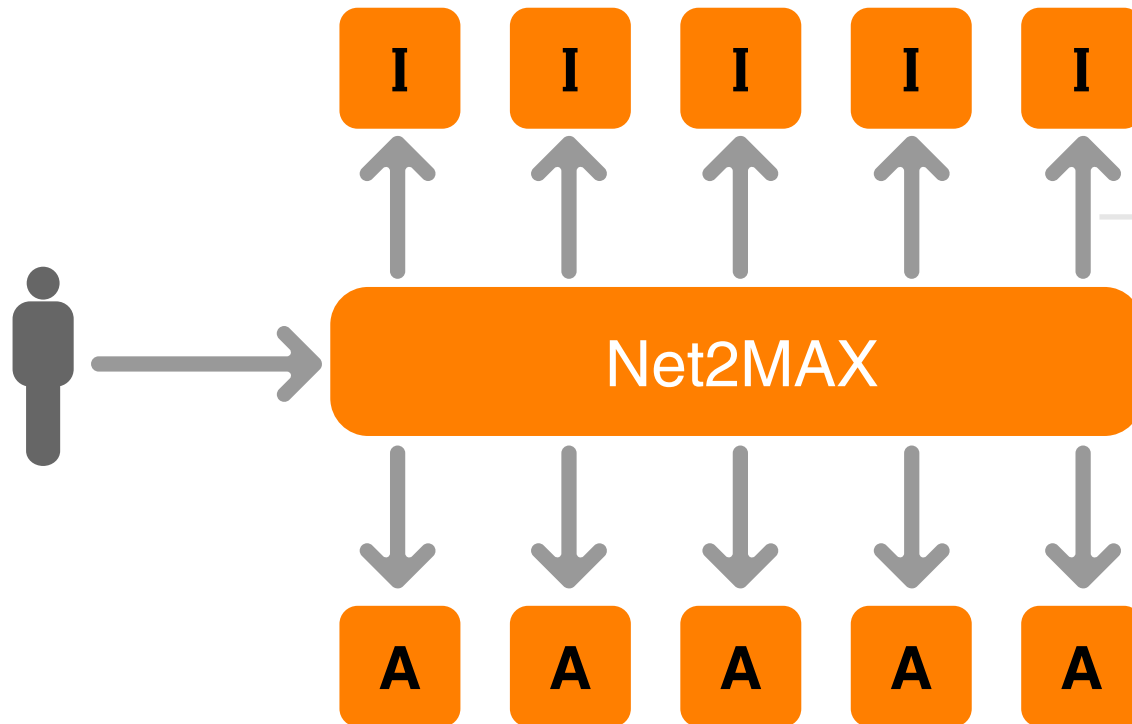

Net2MAX IT Experience

Net2MAX IT Experience

Application Freedom

1. Applications have access to different Infrastructures
2. Full Interaction between different Applications
3. Full Interaction between different Infrastructures
4. Substantial Costs Savings due to sharing of Resources
5. Significant Improvement in Ease of Use due to common User-Interface

Net2MAX is a Manager

Net2MAX Benefits

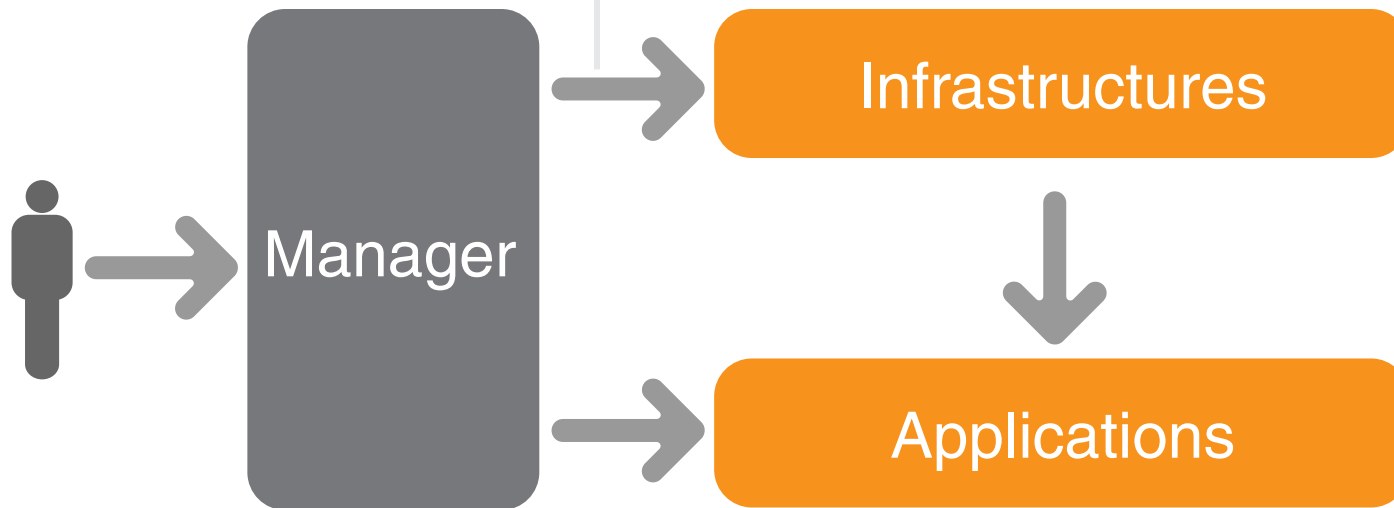

Net2MAX vs Others

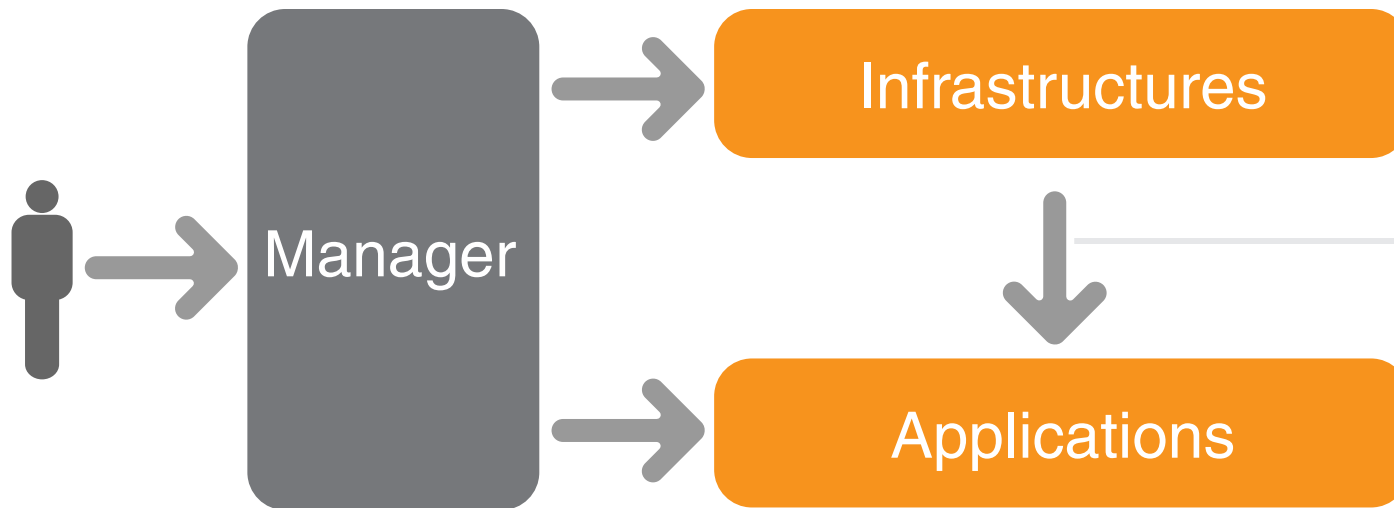

Net2MAX

End-users are shielded from the complexity and uncertainty of IT yet still have the freedom to easily define their own IT experience.

Net2MAX vs Others

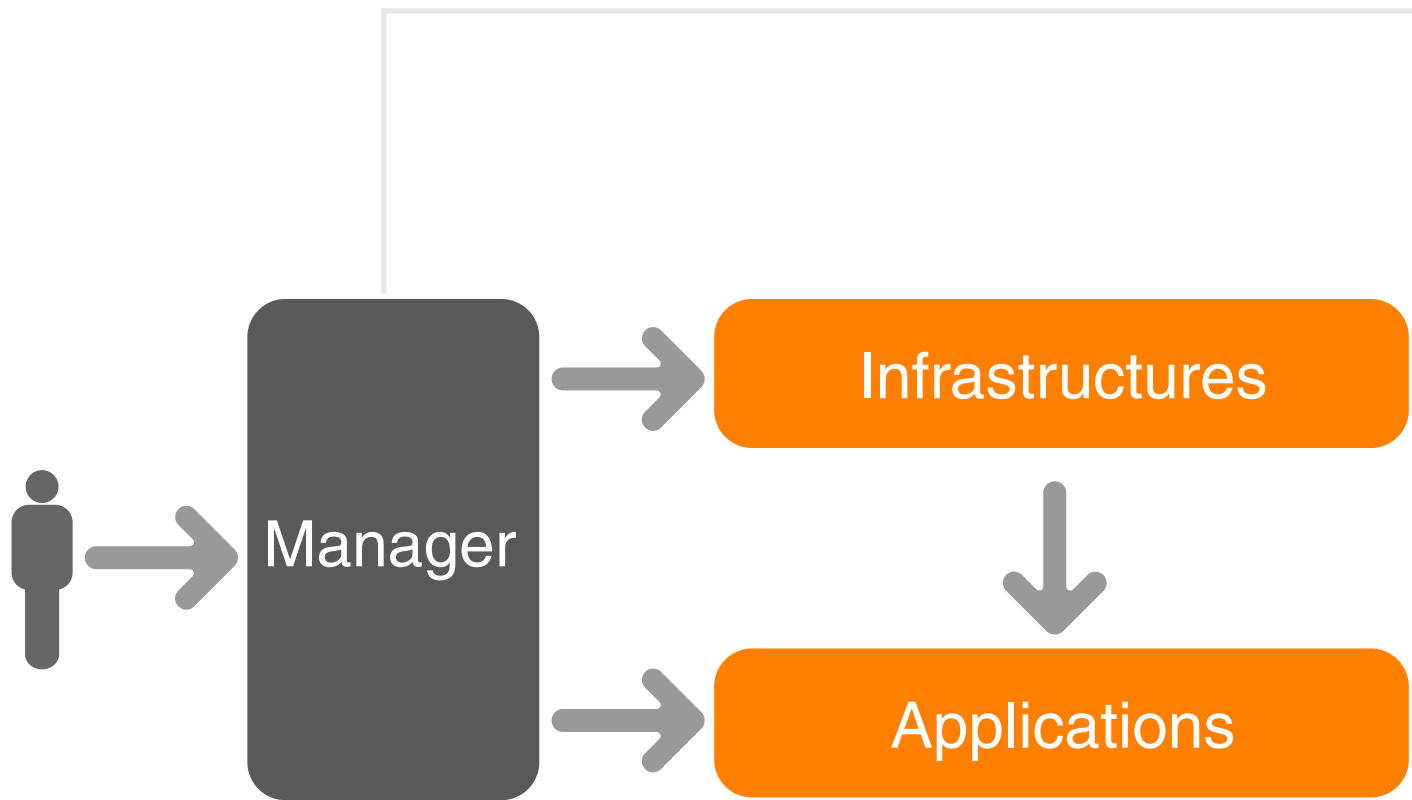

Others

There are other technologies that manage applications and infrastructures (e.g. Microsoft .NET and Sun Java) but they are all for programmers and NOT for end-users.

These technologies still leave the end-user powerless without programmers.

Net2MAX's Role

The Time is Now

IT has been growing at an ever increasing pace for the past decade with no sign of slowing down.

Just like managers are needed when an organisation has reached a certain size or when a job has reached a certain complexity ...

A manager for IT, like Net2MAX, is long overdue.
